

‘O’ LEVEL PROJECT REPORT

– Topic of Report –

**Design and Development of a
Responsive Website for my Institute**

– Submitted By –

Name – Devansh Umar

Father's Name – Mr. Awadhesh Kumar

Course – ‘O’Level (IT)

Reg. No. – 1602909

Mob. No. – 9696575301

Thank You

Objective of the Project –

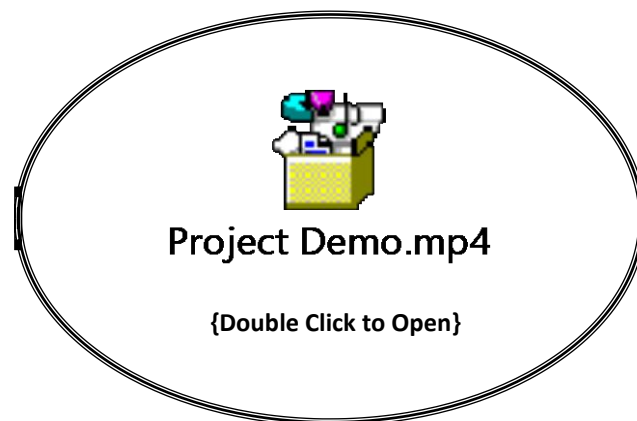

The main objective of this project is to create a website for Globus College of IT Management to apply the web designing concepts learned during the NIELIT O-Level course. The project includes different sections like academics, facilities, testimonials, and an online quiz section to make the website more interactive and useful for users.

Technologies Used –

The following technologies and tools were used during the development of this project:

1. **HTML5** – used to create the structure and content of web pages including text, images, tables, and navigation menus.
2. **CSS3** – used to enhance the visual appearance of the website by applying colours, layouts, fonts, spacing, and responsive design techniques.
3. **JavaScript** – used to add interactivity and dynamic functionality such as online quizzes, timers, score calculation, certificate generation, and user interaction handling.
4. **W3.CSS Framework** – used to simplify responsive design and provide pre-built styling components.
5. **GitHub** – used for project hosting, documentation management, and source code storage.
6. **GitHub Pages** – used to deploy and host the website online, making it publicly accessible through a web browser.

ACADEMICS PAGE

Our Academic Programs

BCA

3 Year Bachelor of Computer Applications

Focuses on programming, database management, web development and networking.

MCA

2 Year Master of Computer Applications

Advanced programming, software engineering and system architecture.

O Level

Government Certified IT Course

A Level

Advanced IT Certification

Tally

Accounting & GST Training

Practical training in accounting software, GST filing and financial reporting.

Skills Learned –

While developing this project, I learned many new concepts related to web designing and website development.

Some of the skills learned during this project are:

- Creating web pages using HTML.
- Designing attractive layouts using CSS.
- Adding interactive features using JavaScript.
- Making websites responsive for different screen sizes.
- Organizing content across multiple web pages.
- Hosting a website using GitHub Pages.
- Preparing project documentation and reports.

This project helped me improve both my technical knowledge and practical development skills.

Challenges Faced –

During the development of this project, I faced several challenges.

One of the main challenges was designing a responsive layout that works properly on both mobile and desktop devices. Managing multiple web pages while keeping the design consistent was also difficult.

Developing the online quiz section required additional effort because it involved timers, score calculation, and certificate generation. Hosting the website online and organizing the project files also required learning new concepts.

These challenges helped me understand web development more deeply and improved my problem-solving skills.

Conclusion –

The project provided practical experience in web design and development using HTML5, CSS3, JavaScript, and W3.CSS.

The website successfully delivers information related to academics, admissions, facilities, quizzes, testimonials, and contact details through a responsive and user-friendly interface. The project helped me to gain problem-solving abilities, and software development skills & I got hands-on experience in website deployment and documentation.

Future Scope –

The website can be further improved by adding online admission forms, student login facilities, database connectivity, and an administrator panel for managing content. Additional features such as online result viewing, fee management, and notification systems can also be implemented in future versions of the project.
